

SET YOUR DEVICES FREE

Monopolies over devices are detrimental to everybody. We should have the right to install and uninstall any software in our machines. Device Neutrality is key for end-users to access and control software, hardware, and services in their devices.

GET RID OF PROPRIETARY CAGES! RUN FREE SOFTWARE IN YOUR DEVICE!

WWW.DEVICENUETRALITY.ORG

Free Software (also known as Open Source Software) refers to freedom, not price. It guarantees users the four essential freedoms: to use, understand, adapt, and share the software.

Your phones, tablets, laptops, and other connected devices are general purpose computers. That means you can potentially run any software you want in order to make full use of the hardware. Free Software fosters this potential.

Free Software facilitates freedom of choice, allowing end-users to configure their equipment in different ways to best meet their needs.

Free Software enables swift reaction to security flaws and vulnerabilities, allowing users and communities to upgrade and reconfigure key software of their devices. End-user control of data benefits from Free Software.

Free Software enhances competition. Users benefit from free choice and steady improvement of programs. Free Software reduces the lock-in effect and promotes interoperability.

Free Software fosters sustainability by allowing older devices to be supported after the manufacturer stops making updates. It reduces hardware waste and improves energy consumption.
