asustor

Release Notes

Name

ADM 2.4.0.RFU1

Installation Notes

● This is the software for the AS50xx/AS51xx series. No matter if you decide to upgrade ADM or not, it is still recommended that you should back up all data on your NAS.

What's New?

● Supports SSD Trim command
● Supports SNMP
● Enhanced ADM Defender and supports Geo IP
● Improved share folder encryption mechanism
● Supports video preview in ADM File Explorer
● Supports the Magyar (Hungarian) language
● Added iSCSI protocol in connection log and file access log
● Increased virtual host number from 8 to 32

Change Log

● Fixed "system hanged during huge size file replication after initialization" issue
● Fixed "LCM shows random codes for local temperature when system fails to get weather information" issue
● Fixed "mounted long file name ISO folder cannot be accessed via SAMBA" issue
● Fixed "system configuration manual import/export" issue on AS-6/70 series
● Fixed "using copy-skip option skips all files in the subfolder with duplicate name" issue
● Fixed "thumb.db automatically appears in a folder which contains picture or video files" issue
● Fixed "the key code of ASUSTOR remote conflicts with some other remote controllers" issue
● Fixed "connection log interrupts SAMBA connections" issue
● Fixed "the IP will be blocked if it exists on white list and trusted list simultaneously" issue
● Fixed "scheduled bad block scan task incorrectly displayed" issue
● Fixed "AS7012R slot 10 flash frequency is slower than other slots" issue
● Updated Linux tools set to enable tunnel and rule options for ip command
